Groz-Beckert InLine

The innovative card clothing series for increased process reliability in high-performance roller cards

Groz-Beckert InLine card clothing for the nonwovens industry are produced in accordance with the Groz-Beckert principles: Production to the highest quality standards and the Groz-Beckert process reliability. The InLine card clothing is characterized by more resistant teeth and a completely scale-free surface. Through consistent and sustainable conservation of resources, Groz-Beckert is also helping to protect the environment with the new card clothing series.

Increased lifetime

In practice, card clothing often is replaced prematurely due to damage of the card clothing teeth only. The higher resistance of Groz-Beckert InLine card clothing enables the card clothing to be used over a longer period.

Resistance and deformation of a doffer wire tooth with load from the side

Shorter run-in phase and consistent high web quality thanks to strong card clothing

Thanks to the completely scale-free surface, the function of the card clothing remains consistent — from the first mounting, over the entire usage duration. The usual run-in phase of several weeks is thus significantly reduced. The fiber-friendly card clothing no longer changes its character and the precise hardening also ensures a consistent high web quality.

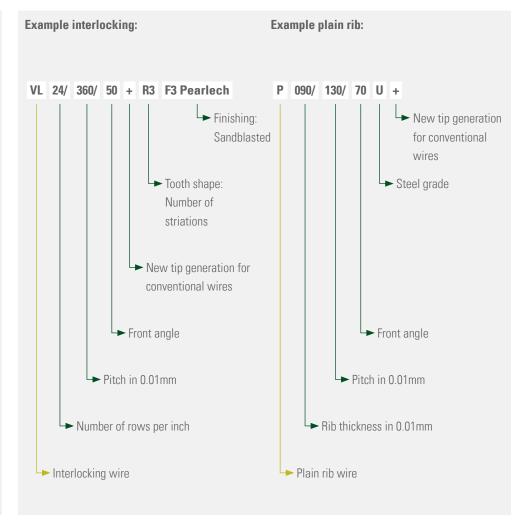

GROZ-BECKERT

In order to meet the demand on the market for a more detailed card clothing designation, the card clothing coding for the Groz-Beckert InLine card clothing series has been re-defined.
